

4 | Years of Dedicated Support

At Midwestern Career College (MCC), we believe in the power of education, community, and compassion. For the fourth consecutive year, we are honored to stand alongside the Epilepsy Foundation of Greater Chicago as we participate in their annual Fall Fest fundraising event. This longstanding partnership embodies our commitment to making a meaningful impact on the lives of individuals affected by epilepsy and neurological disorders.

Empowering the Future with the Electroneurodiagnostic Technology program

MCC takes immense pride in offering an exceptional Electroneurodiagnostic Technology program at our Chicago LaSalle campus. This specialized program equips students with the skills and knowledge needed to become EEG Technologists, contributing to the diagnosis and treatment of epilepsy and other neurological disorders. By educating the next generation of healthcare professionals, we are paving the way for improved patient care and a brighter future for those impacted by epilepsy.

Bridging Education and Clinical Experience

As part of our commitment to excellence, MCC has formed partnerships with multiple renowned epilepsy centers in the Chicagoland area including:

- Rush University Medical Center
- UChicago Medicine
- Advocate Aurora Health
- Northshore University HealthSystem
- Northwestern Medicine
- Loyola University Medical Center

Through these partnerships, we offer our Electroneurodiagnostic Technology students hands-on clinical experience in real-world healthcare settings. By working closely with our clinical partners, our students gain invaluable insights, refine their skills, and contribute directly to patient care under the guidance of experienced professionals.

Impacting Lives, One Step at a Time

Our participation in the Epilepsy Foundation's 5K Fall Fest is more than just a fundraiser—it's a testament to our shared vision of creating a world where epilepsy is better understood, treated, and ultimately, cured. Every step we take, every dollar we raise, and every individual we educate brings us closer to achieving that vision. We're not just supporting a cause; we're making a tangible difference in the lives of countless individuals and families who are navigating the challenges of epilepsy.

51-week program

550 hours of clinical experience

Downtown Main Campus:
203 N LaSalle, Chicago IL 60601

MCC's program is one of the few in the United States currently approved by the American Board of Registered Electroencephalographic Technologists (ABRET) as a pathway to R. EEG T. certification.

Curious about becoming an EEG Tech?

Individuals interested in becoming an EEG tech often have a strong personal interest in the fields of neuroscience, medical technology, and patient care. They might also have a fascination with understanding brain function and the electrical activity within it.

Curiosity about the diagnostic process, the impact of neurological disorders, or the role of technology in healthcare are often additional interests. Some of our students come from backgrounds of having personal or family connections to epilepsy and this drives their desire to make a meaningful difference in patients' lives and actively contribute to finding a cure.

What do EEG Techs do?

Electroencephalographic technologists record electrical activity of the brain, spinal cord and peripheral nerves. They also prepare patients for procedures and obtain medical histories. Technologists work with specially trained physicians who interpret data and provide clinical impressions. They may be specialized in one or more neurodiagnostic procedures, which provides opportunities to work in many areas such as neurology and surgery.

Read a success story of an MCC EEG graduate and his journey living with epilepsy

"...Roll with the punches a little bit, get back up, keep fighting, just knowing that there are so many other people out there, going through that same experience."

Brendan Wolfe
Graduate, Electroencephalographic
(END) Technology Program.
